I did not use AI on this assignment. I did use the professor's code for the questions with loops (2 and 3) and for question 4. Questions 1 and 5 were done by me.

Question 1:

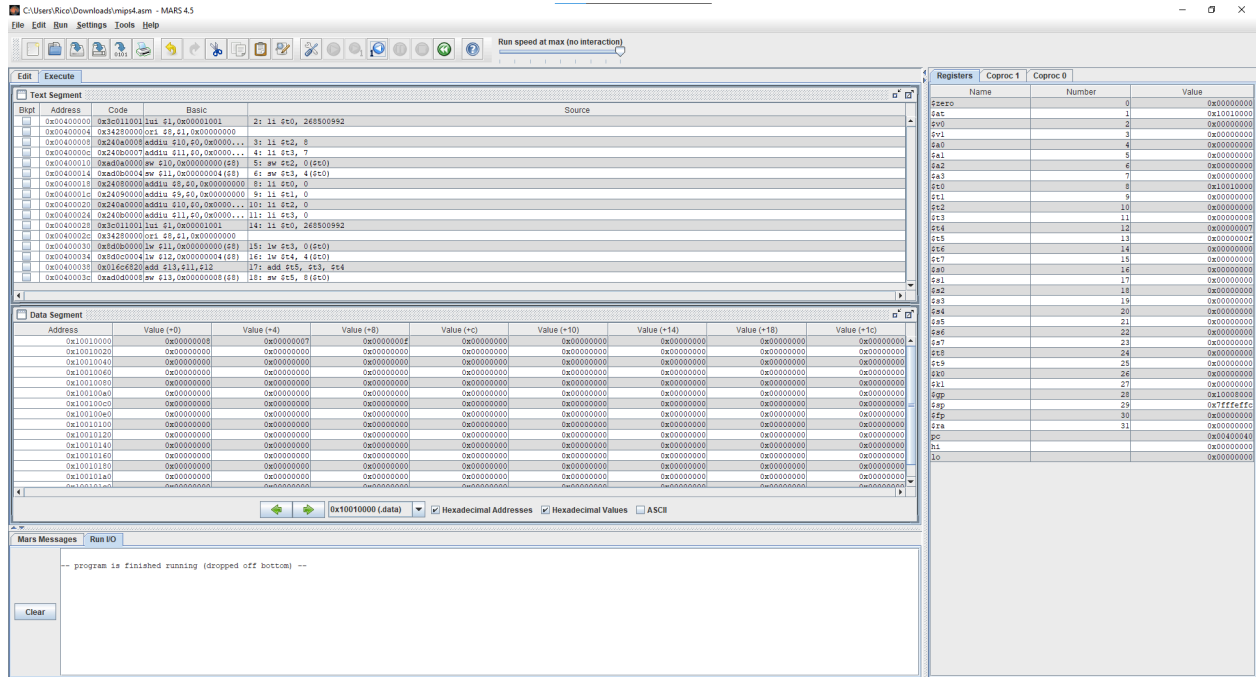

Question 2:

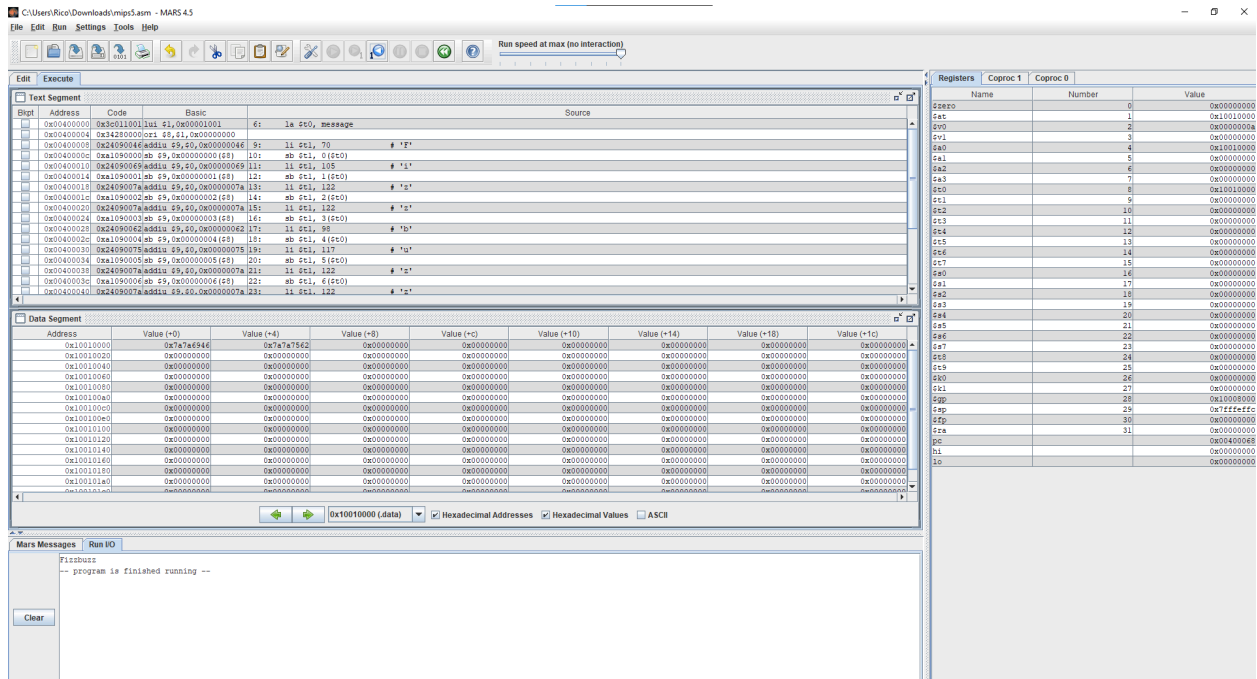

Question 3:

Question 4:

Question 5:

Reflection:

This was a pretty interesting and easy introductory assignment for MIPS. I decided not to include the register traces because that would have taken a lot of space, I think. I did run the programs one step at a time for 1/4/5 and did the same for the loop questions for the first ten values. I did this so I could personally observe how it worked. It was nice of the professor to provide a lot of the code in class so we could follow along. I may need to review the loop code. I don't think it's a coincidence that those are the ones I pretty much took from the professor and the same ones that I don't understand 100%.
